DETAILED ACTION

Allowable Subject Matter

- 1. Claims 8-19 and 21-35 allowed.
- 2. Claims 6 and 7 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1 and 3-5 rejected under 35 U.S.C. 103(a) as being unpatentable over Sidner et al. (4,945,769) in view of Elderstig (5,690,841) further in view of Mirza et al. (5,883,420)

Regarding Claims 1 and 3-5, Sidner et al. disclose a semiconductor structure useful as a pressure sensor where in Fig. 2G, buried cavity is completely surrounded by monocrystalline semiconductor structure 12. Furthermore, layer 24 in Fig. 2F is a epitaxial inhibiting material which is disclosed to be one of oxide, nitride of TEOS. Sidner et al. fail to disclose this epitaxial growth inhibiting material to coat the walls of the cavity and the required liner/oxide along the bottom of the cavity. However, Elderstig et al. disclose a method for producing cavity structures where in Fig. 5, cavity 4 has a wall coated with epitaxial inhibiting oxde material 5. Furthermore, Mirza et al.

Art Unit: 2826

disclose a sensor device having a pathway and a sealed cavity where in Fig. 1, liner/oxide material 19 covers the bottom of the buried cavity 13.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required coating of the wall of the cavity and the require liner/oxide in the bottom of the cavity in Sidner et al. as taught by Elderstig and Mirza et al. in order to have a semiconductor device with increased reliability.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (571) 272-1914. The examiner can normally be reached on M - F 8:00 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nathan Flynn can be reached on (571) 272-1915. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
